

Pharmaceutical Waste Management

UNUSED AND PARTIALLY USED PHARMACEUTICAL WASTE RECOVERY

Helping dental offices cost effectively manage pharmaceutical waste with mailback solutions.

Unused and Partially Used Pharmaceutical Waste

PROPER DISPOSAL PER LOCAL, STATE AND FEDERAL ENVIRONMENTAL REGULATIONS

Pharmaceutical waste should not be disposed of in the trash, flushed down the toilet or drain. This can have a negative environmental impact unless it is properly recovered and destroyed through an approved processing facility. HealthFirst provides you with a convenient and safe way to dispose of your unused and partially used non-controlled routine medications, including dental carpules.

Maximize Your Savings with Mailback

Mailback solutions for your pharmaceutical waste keeps your costs low by only sending in your containers for disposal when they are full. The pre-addressed, pre-paid UPS shipping box and EPA-approved processing services are included in one low price. No contracts, no monthly minimum orders are required when you use mailback services.

OnTraq

OnTraq, HealthFirst's practice readiness application, reduces the risks, headaches and costs of pharmaceutical waste regulatory compliance. It dynamically shows what pharmaceutical waste products you have active in the office and those that have been returned for disposal. Rely on OnTraq's smart automation for dashboards, digital processing certificates, compliance reports and task management.

2-Gallon Mailback Container
